

ABSTRACT OF THE DISCLOSURE

The present invention is a system and method using information system technology which provides end-use customers and the sponsors of private labeled laboratory testing analysis programs the ability to utilize any laboratory or number of laboratories (commercial or internal), or on-site testing equipment concurrently and/or in succession and to receive all of the services and benefits of each individual source. In addition, the end-use customers, as well as the suppliers, benefit from the ability to combine all source data to from a comprehensive and uninterrupted analysis program over a long period of time, improvement of each individual sourced program through optional enforcement of specific data integrity parameters, creating a powerful data repository, and use internet technology to improve the ease of use of each and all sourced programs.
